

CT	Crane Tank - a T type loco fitted with load lifting apparatus
F	Fireless steam locomotive
IST	Inverted Saddle Tank
PT	Pannier Tank - side tanks not fastened to the frame
ST	Saddle Tank
STT	Saddle Tank with Tender
T	side Tank or similar - a tank positioned externally and fastened to the frame
VB	Vertical Boiled locomotive
WT	Well Tank - a tank located between the frames under the boiler
BE	Battery powered Electric locomotive
BH	Battery powered electric locomotive - Hydraulic transmission
CA	Compressed Air powered locomotive
CE	Conduit powered Electric locomotive
D	Diesel locomotive - unknown transmission
DC	Diesel locomotive - Compressed air transmission
DE	Diesel locomotive - Electrical transmission
DH	Diesel locomotive - Hydraulic transmission
DM	Diesel locomotive - Mechanical transmission
F	(as a suffix, for example BEF, DMF) – Flameproof (see following paragraph)
FE	Flywheel Electric locomotive
GTE	Gas Turbine Electric locomotive
P	Petrol or Paraffin locomotive - unknown transmission
PE	Petrol or Paraffin locomotive - Electrical transmission
PH	Petrol or Paraffin locomotive - Hydraulic transmission
PM	Petrol or Paraffin locomotive - Mechanical transmission
R	Railcar - a vehicle primarily designed to carry passengers
RE	third Rail powered Electric locomotive
WE	overhead Wire powered Electric locomotive

FLAMEPROOF locomotives, usually battery but sometimes diesel powered, are denoted by the addition of the letter **F** to the wheel arrangement in column three.

CYLINDER POSITION is shown in column four for steam locomotives.

In each case, a prefix numeral (**3, 4, etc**) denotes more than the usual two cylinders.

IC	Inside cylinders
OC	Outside cylinders
VC	Vertical cylinders
G	Geared transmission - suffixed to IC, OC or VC

RACK DRIVE. Certain locomotives are fitted with rack-drive equipment to enable them to climb steep inclines; and were mainly developed for underground use in coal mines. The pattern of rack used was the "Abt" design. Locos that were built with (and are thought to still retain) this equipment are indicated by the word **RACK** in column four. However, due to contraction of the coal industry, such locos have often been transferred to sites where the rack equipment is no longer in use.

ROAD/RAIL. Certain locomotives are capable of working on either rail or road, many being of either Unilok or Unimog manufacture. These are indicated by **R/R** in column four.

STEAM OUTLINE. Non-steam locomotives, with a steam locomotive appearance added, are shown by **s/o** in column four.

MAKERS. The builder of the locomotive is shown in column five; the abbreviations used are listed on pages 10 to 21.

MAKERS NUMBER and DATE. The sixth column shows the works number, the next column the date which appears on the plate, or the date the loco was built if none appears on the plate.

DOUBTFUL INFORMATION. Information known to be doubtful is denoted as such by the wording, or printed in brackets with a question mark. Thus, Wkm (7573 ?) 1956 denotes that the loco is a Wickham built in 1956, and possibly of the works number 7573.

MISCELLANEOUS NOTES.

c	denotes circa, i.e. about the time of the date quoted
Dsm	indicates a "long-term" dismantled locomotive (as an aid to photographers, etc) Note: battery locos not carrying a battery are not regarded as Dsm
DsmT	used for motorised trollies which have been converted to engineless trailers
Pvd	denotes Preserved on site
reb	denotes the locomotive was rebuilt (by, and when, as per list) Note: "rebuilt" infers significant alteration to transmission or appearance; not a routine overhaul no matter how thorough that may have been
rep	indicates a major repair, and is ONLY detailed in the listings when a "repair plate" is (or was) affixed to the loco (and thus an aid to identification).
OOU	"Out Of Use" - indicates a locomotive which has, apparently permanently or at least for a significant period of time, ceased work

There are cases where all locomotives at a site are OOU but the railway, siding etc, is still in use, utilising a road tractor, cable-haulage or man-power for example.

Electric locomotives at steelworks and colliery sites are usually to be found working at Coke Ovens, the grid reference for the Ovens being shown in the usual place, when known.

BUILDERS and REBUILDERS of LOCOMOTIVES

A

A&O	Alldays & Onions Ltd, Birmingham
AB	Andrew Barclay, Sons & Co Ltd, Caledonia Works, Kilmarnock, Ayrshire
ACCars	A.C.Cars Ltd, Thames Ditton, Surrey
